Art Unit: 2874

1. Applicant's communication filed on February 2, 2006 has been carefully studied by the Examiner. The amendment made to claim 1 overcomes the rejection made by Harwood reference. However, The arguments advanced therein regarding the applicant's admitted prior art and the Kang reference is not persuasive and the rejections based upon prior art made of record in the previous office action are hereby maintained. Thus, this is made final.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(f) or (g) prior art under 35 U.S.C. 103(a).

3. Claims 1-5, 7-13 and 15-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted prior art as shown in figures 1A and 1B and further in view of Kang et al (U.S. Patent 6,629,780 B2).

Applicant's admitted prior art teaches all the claimed limitations (see Fig. 1A and 1B of applicants drawing) except a recess having two different internal perimeters. Kang et al teaches inserting a fiber into an opening and further teaches having a wide opening on the side where fibers will be inserted while having a narrower opening at the point where the fibers exit makes fiber insertion easier. Thus, it would have been obvious to one having ordinary skill in the art at the time the invention was made to use a wider opening in applicant's admitted prior art to make the insertion of the ferrule into the base easier.

Response to Arguments

4. Applicant's arguments filed February 2, 2006 have been fully considered but they are not persuasive. In response to applicant's arguments against the references individually, one cannot show nonobviousness by attacking references individually where the rejections are based on combinations of references. See *In re Keller*, 642 F.2d 413, 208 USPQ 871 (CCPA 1981); *In re Merck & Co.*, 800 F.2d 1091, 231 USPQ 375 (Fed. Cir. 1986). Applicant argues that the Kang reference does not teach the friction-fit. However, the friction fit (interference fit) is taught by the applicant's admitted prior art.

Conclusion

5. THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Nakajima et al (U.S. Patent 5,858,161) teaches a ferrule base (see Fig. 5). Cartier (U.S. Patent 4,781,429) teaches an optical fiber connection base for receiving an optical fiber ferrule (see Fig. 5). Carlisle et al (U.S. Patent 6,017,154) teach an optical fiber connector. Okada (U.S. Patent 6,501,876 B1) teach an optical coupling device for an optical communication apparatus.
